UnicodeDecodeError 'utf8' Invalid Continuation Byte

>>>CLICK HERE<<<
When I launched GNS3 1.2.1, it appears the following error:

```
UnicodeDecodeError: 'utf-8' codec can't decode byte 0xed in position 1357: invalid continuation.
UnicodeDecodeError: 'utf-8' codec can't decode byte 0xe1 in position 10: invalid continuation byte.
```

How to fix this problem?

```
import shapefile
import json
def Feature_GetFieldAsString(self, *args):
    try:
        return codecs.utf_8_decode(input, errors, True)
    except Exception as e:
        pass
```

There is sample code.

```
UnicodeDecodeError: 'utf8' codec can't decode byte 0xe9 in position 534: invalid continuation byte.
```

A UnicodeDecodeError will be thrown if the output contains invalid UTF8 data.

```
'utf8' codec can't decode byte 0xc3 in position 1087: invalid continuation byte.
```

UnicodeDecodeError: 'utf8' codec can't decode byte 0xcb in position 5: invalid continuation byte.

My web app ran very well before, but days ago a problem came.

```
UnicodeDecodeError: 'utf8' codec can't decode byte 0xe9 in position 20: invalid continuation byte.
```

I found this similar post about codec error (for ASCII in this).

```
in GetShortPathName long_path, FormatError(err), err)
```

UnicodeDecodeError: 'utf8' codec can't decode byte 0xd5 in position 4: invalid continuation byte.

```
ninja:
```

```
BUFFERDecode(data, self.errors, final) UnicodeDecodeError: 'utf-8'
```

It's correct to raise UnicodeDecodeError, but the text of the message is a bit obscure. I'm not sure whether the "invalid continuation byte" is talking.

homeHoudiniDirectory(*args) UnicodeDecodeError: 'utf8' codec can't decode byte 0xd8 in position 9: invalid continuation byte. Error while checking for updates Here is the error message: UnicodeDecodeError: 'utf8' codec can't decode byte 0xc2 in position 18: invalid continuation byte. This might be one of those obvious.

'utf8' codec can't decode byte 0xe9 in position 81: invalid continuation byte #247. Closed. Messiadbunny opened this Issue on Dec 21, 2014 · 7 comments. #2989 new defect. UnicodeDecodeError: 'utf8' codec can't decode byte 0xc3 in position 4: invalid continuation byte. Reported by: antivirtel, Owned by: Priority. Error 'utf8' codec can't decode byte 0xe9 in position 0: invalid continuation byte Traceback Traceback (most recent call last): File. >>>CLICK HERE<<<
